
C3H.SW mice, which cannot produce IgA antibodies, is characterized by a severe skin inflammation. T-cells from C3H.SW mice stimulated with OVA in vitro produced a high amount of IL-13, a cytokine that is important in the development of AD. We hypothesize that IgA antibodies produced by the B-cells are responsible for initiating a skin inflammation through interaction with the FcεRI on mast cells, resulting in the production of Th2 cytokines, such as IL-13. We will test this hypothesis through the following Specific Aims. In Aim 1, we will characterize IgA antibodies produced by C3H.SW mice before and after OVA sensitization. In Aim 2, we will determine whether blocking the interaction between IgA and FcεRI on mast cells prevents the development of the skin inflammation. SOLD OUT!!!! SOLD OUT!!!!!! Space is limited!!! Come sign up today and make your mark on A day that demands action to preserve our environment for generations to come. Let's see if you are truly on the front line of the global warming battle or just a phony. You must a) Be 18 years old. b) 6d1f23a050
